

s.ONE: An application for alerting, monitoring and resource management

The economical platform for fast, targeted alerting with a feedback channel and resource monitoring

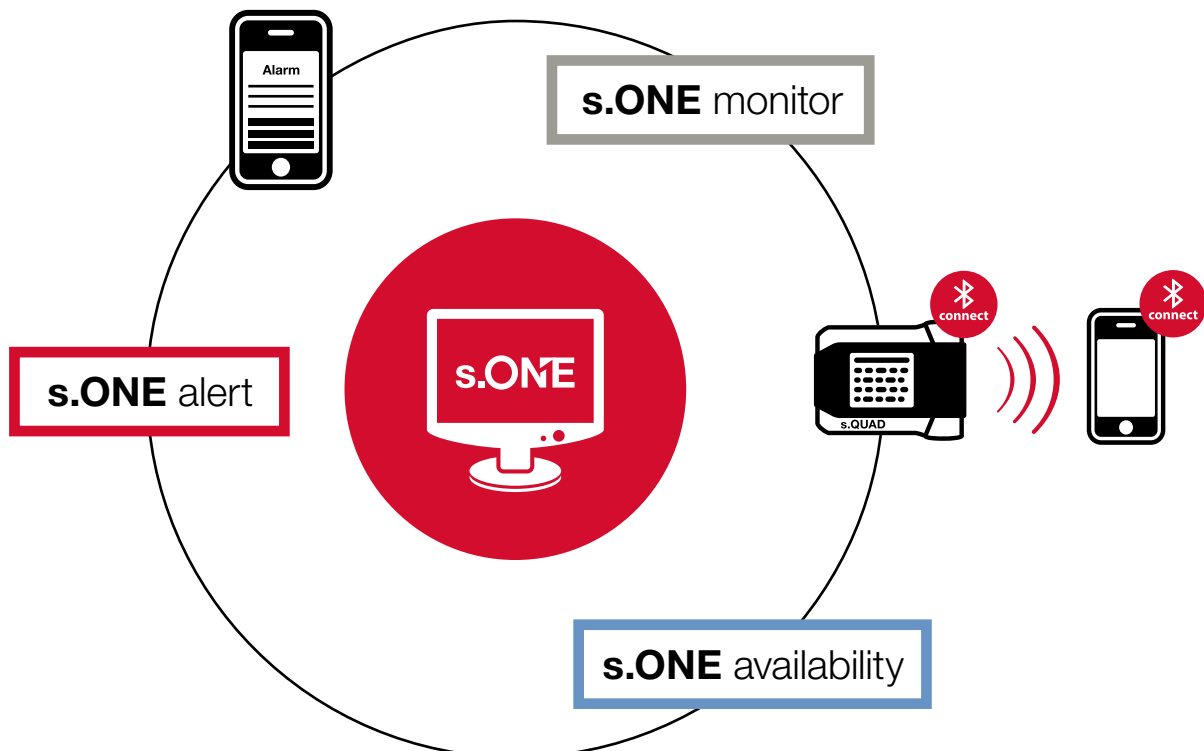

s.ONE does it all

It is a complete, fully developed application for holistic resource management. The core of this intelligent solution is a state-of-the-art, flexible alerting system that fulfils all relevant requirements, in the alerting process. s.ONE provides dispatcher, fire chiefs and emergency responders with various features and interfaces in order to improve efficiency before, during and after an alert.

For instance, an intelligent algorithm allows operations directors to already know what kinds of emergency scenarios they can address with the required resources before an event occurs. If critical situations, such as absent drivers, are detected, countermeasures can be taken before an event occurs. Emergency responders use an alert to acknowledge whether they are responding. This answer is displayed to the operations director in real time on the s.ONE dashboard via an intuitive, easy-to-read light signal system. This system provides the operations director with a constant overview of whether enough specialists are responding and whether he or she needs to

send a follow-up alert. Thanks to a Bluetooth gateway app, s.ONE provides emergency responders with the option to send acknowledgements from various end devices such as the s.QUAD pager or the s.ONE mobile app.

s.ONE is the platform that combines various different alerting components and systems in a single application and makes alerting more faster, more economical and more precise. The interfaces to the pagers increase flexibility and efficiency for all user groups involved.

Three intelligent modules

1 s.ONE availability

s.ONE availability shows in real time which of the defined alerting plans can be carried out with the available resources. Each alerting plan contains various scenarios that determine how many and what kind of emergency responders – such as firefighters, paramedics, drivers or respiratory protection specialists – need to be dispatched in an emergency.

The s.ONE user interface shows the operations director in real time how many and what kind of specialists are available or present.

This makes s.ONE the ideal application for getting a sense of current availability even before an event occurs, thereby allowing directors to introduce countermeasures early on. Combined with the graphical interface, s.ONE allows operations directors to always maintain an overview: Clearly arranged diagrams provide information about who is currently responding, who is on duty and who is on standby.

Your advantages:

- Real-time information on team availability
- Simple status changes for rescue services ('available'/'unavailable')
- Clear graphical display of total availability and availability of certain types of responders
- Positioning/tracking of emergency responders

2 s.ONE monitor

s.ONE monitor allows users to take full advantage of a feedback channel connected to the corresponding pager models via the cellular network. This lets operations management know which alert messages the alerted emergency responders will receive at what time. Moreover, this also provides emergency responders with the option to acknowledge the alert by responding via the pager. A gateway app and Bluetooth (s.QUAD) via smartphone. Ensures that the control centre or the fire department remains constantly informed – in real-time – of who is on its way to the station or the site of the event.

The s.ONE dashboard (user interface) is the central interactive information board that displays all feedback from the emergency responders in a visually appealing manner in real-time. This lets users recognise at first glance what the status of the alerting is – predefined colours and graphics help them make decisions even more reliably and send follow-up alerts in a faster, more targeted manner.

Your advantages:

- Responses from end devices are displayed in real-time
- All important information shown on the dashboard, multi-screen workstations possible
- Customisable work interface
- Automatic prioritisation – critical states are automatically highlighted in the display
- Automatic display when triggered alerts cannot be addressed
- Ideal basis for quick, targeted follow-up alerting

3 s.ONE alert

s.ONE alert, features comprehensive services for reliably and efficiently alerting emergency responders. This application perfectly complements s.ONE monitor for providing targeted follow-up alerts. Each alert sent from s.ONE alert is logged in the archive function to ensure full transparency and traceability. s.ONE supports sending follow-up alerts; these are triggered in a targeted way, which prevents too many alerts from being sent.

Your advantages:

- Quick and easy alerting through a clear user interface
- Various different technologies for alerting emergency responders – paging, e-mail or text
- Integrated technical feedback as to whether the alert was received, and by whom
- Enables quick, targeted follow-up alerting
- Prevents costly excessive alerting systems
- Intuitive, clear user interface

Products

s.ONE Client

s.ONE availability

Real-time information on team availability, per station or dispatch groups

s.ONE monitor

Graphical overview about real-time responses and display alerts if the call is understaffed

s.ONE alert

Quick, targeted follow-up alerting with paging, e-mail or text message

s.ONE Alert and Response App

- Alert message, with address link to a map routing application
- Respond to an alert
- Change availability status
- Available for iPhone and Android phones

s.QUAD Pager

- Outstanding reception performance
- Extremely robust (6.5 feet drop test) and dust- and waterproof
- Multi-colored alarm LED
- Extremely loud (95 dB(A) @ 1 feet)
- Fully graphic, high-resolution display for over 200 characters per page

s.QUAD Gateway App

- Communication gateway for s.QUAD to s.ONE
- Basic configuration for s.QUAD
- Available for iPhone and Android phones

Quick Charger (s.QUAD)

- Constant current charging or trickle charging to maintain battery capacity
- LED indication for both charging modes
- BNC type antenna connection
- 6-PIN socket for easy connection of external devices

Leather Case, Holster s.QUAD

- Flip down case, Holster (s.QUAD)
- Becase
